

# Electrical Safety in the Workplace

Presenter: Ray Struffolino, COSS, NFPA-70e EHS  
Trainer

# Introduction

## Lesson objectives:

1. Identify major electrical hazards
2. Describe types of electrical hazards
3. Describe electrical protection methods
4. Lockout/Tagout
5. Recognize employer requirements to protect workers from electrical hazards

# Introduction

Definitions:

- ▶ Electricity - movement of the free electrons between atoms;
- ▶ Related terms:
  - ▶ Current - the movement of electrical charge
  - ▶ Resistance - opposition to current flow
  - ▶ Voltage - a measurement of electrical force

# Introduction

- ▶ Conductors - substances, such as metals, that have little resistance to electricity
- ▶ Insulators - substances, such as **dry** wood, rubber, glass and Bakelite, that have high resistance to electricity
- ▶ Grounding - a conductive connection to the earth which acts as a protective measure

# Electrical Hazards

Serious injuries and death can be caused by electrical hazards such as arc flash, shocks, burns, falls, and fires. Source of graphics: OSHA

# Electrical Hazards

**BE SAFE:**

- ▶ **Burns**
- ▶ **Electrocution**
- ▶ **Shock**
- ▶ **Arc flash/arc blast**
- ▶ **Fire**
- ▶ **Explosions**

# Electrical Hazards

## Burns:

- ▶ Most common shock-related injury
- ▶ Three types of electrical burns:
  - ▶ Electrical
  - ▶ Arc flash
  - ▶ Thermal contact

# Electrical Hazards

## Electrocution:

- ▶ Is fatal
- ▶ Meaning: to kill with electrical shock
- ▶ Results when a human is exposed to a lethal amount of electrical energy

# Electrical Hazards

## Shock:

- ▶ Body becomes part of electrical circuit
- ▶ Reflex response to passage of electric current through the body

# Electrical Hazards

## Arc Flash/Arc Blast

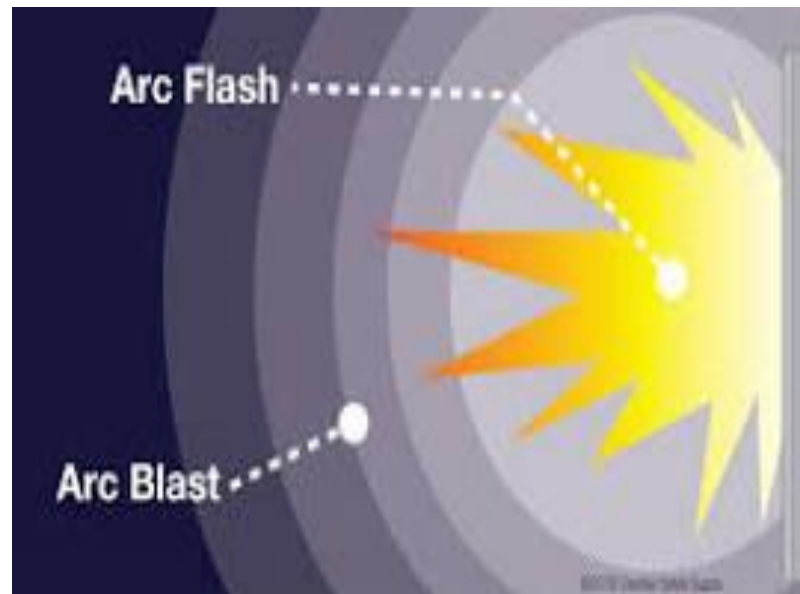

### ▶ Arc flash

- ▶ Sudden release of electrical energy through air when a high-voltage gap exists and there is a breakdown between conductors
- ▶ Gives off thermal radiation (heat) and bright, intense light that can cause burns
- ▶ Temperatures as high as 35,000°F ( Four times hotter than the surface of the sun )

# Electrical Hazards

- ▶ Arc blast - high-voltage arcs can also produce considerable pressure waves by rapidly heating the air and creating a blast

# Electrical Hazards

## Fire:

- ▶ Most result from problems with "fixed wiring"
- ▶ Problems with cords, plugs, receptacles, and switches also cause electrical fires

shutterstock.com · 1819949432

shutterstock.com · 2414514243

# Electrical Hazards

## Explosions:

- ▶ Occur when electricity ignites explosive mixture of material in the air
- ▶ Note:
  - ▶ Electricity is source of these hazards
  - ▶ All hazards are of equal importance
  - ▶ Lesson focuses on eliminating electrical hazards

# Electrical Hazards (Statistics)

U.S. Bureau of Labor Statistics, OSHA and ESFI

- ▶ In 2024, there were **1738** fatal injuries from direct contact with electric current.
- ▶ **10 to 1** Ratio: For every one fatality there are approximately ten non fatal electrical injures.

Source of graphics:  
OSHA

# Types of Electrical Hazards

Contact with overhead power lines:

- ▶ Overhead and buried power lines carry extremely high voltage
- ▶ Risks
  - ▶ Electrocution (main risk)
  - ▶ Burns and falls

Source: NIOSH

# Types of Electrical Hazards

- ▶ Cranes are not the only equipment that can reach overhead power lines.
- ▶ Use of ladders or suspension in a man-basket under or near power lines are risks.

Source:  
OSHA

# Types of Electrical Hazards

- **Important:** the covering on an overhead power line is primarily for weather protection; therefore, workers need to know that if they touch a power line, covered or bare, death is probable.

# Types of Electrical Hazards

Contact with energized sources:

- ▶ Live parts
  - ▶ The major hazards
    - ▶ Electrical shock and burns
    - ▶ Electrical shock occurs when the body becomes part of the electric circuit

# Types of Electrical Hazards

- ▶ **Severity and effects of an electrical shock depend on a number of factors**
  - ▶ Pathway through the body
  - ▶ Amount of current
  - ▶ Length of time of the exposure
  - ▶ Whether skin is wet or dry
- ▶ **Water**
  - ▶ Great conductor
  - ▶ Allows current to flow more easily in wet conditions and through wet skin

(1,000 milliamperes = 1 amp; therefore, 15,000 milliamperes = 15 amp circuit)

| Current  | Reaction  |
|--|---|
| Below 1 milliampere                            | Generally not perceptible   |
| 1 milliampere                                  | Faint tingle  |
| 5 milliampere                                  | Slight shock felt; not painful but disturbing. Average individual can let go. Strong involuntary reactions can lead to other injuries         |
| 6-25 milliamperes (women)                      | Painful shock, loss of muscular control   |
| 9-30 milliamperes (men)                        | The freezing current or “let-go” range. Individual cannot let go, but can be thrown away from the circuit if extensor muscles are stimulated. |
| 50-150 milliampres                             | Extreme pain, respiratory arrest, severe muscular contractions. Death is possible.  |
| 1,000-4,300 milliamperes<br>( 1 to 4 Amperes ) | Rhythmic pumping action of the heart ceases. Muscular contraction and nerve damage occur; death likely  |
| 10,000 milliamperes<br>( 10 Amperes )          | Cardiac arrest, severe burns; death probable  |

This table shows the body's reaction when exposed to various levels of current. Source: OSHA

# Types of Electrical Hazards

## ▶ Damaged or bare wires

- ▶ Fault current may travel through a body, causing electrical burns or death, if
  - ▶ Power supply is not grounded
  - ▶ Path has been broken
  - ▶ There are live parts or bare wires
- ▶ Extreme conditions and rough treatment can change electrical equipment from safe to hazardous

# ARC FLASH Labeling of Equipment

**WARNING**

**ARC FLASH HAZARD**  
APPROPRIATE PPE REQUIRED

|                                 |                     |                   |
|---------------------------------|---------------------|-------------------|
| 5.16 cal/cm <sup>2</sup> @18 in | Arc Flash Boundary  | Glove Class<br>00 |
| 45 in                           | Shock Risk          |                   |
| 480 VAC                         | Limited Approach    |                   |
| 42 in                           | Restricted Approach |                   |

12 in

**PPE:** Arc Rated Long Sleeve Shirt, Arc Rated Pants, or Arc Rated Coverall, Arc Rated Face Shield, Arc Rated Balaclava, Hard Hat, Safety Glasses, Hearing Protection, Leather Gloves, Leather Work Shoes

**DANGER**

**Arc Flash Hazard**  
Appropriate PPE Required

Do not operate controls or open covers without appropriate personal protection equipment.

Failure to comply may result in injury or death!

Refer to NFPA 70E for minimum PPE requirements.

**DANGER**

**ARC FLASH HAZARD**  
As per OCE, ENG, G01, 01

|   |                           |                       |       |
|---|---------------------------|-----------------------|-------|
| Equipment Name  | Eastern Reclaim 415V SWBD |                       |       |
| Location  | Bayswater Power Station   |                       |       |
| Voltage Level, Volts                                    | 415                       | Fault Current, kA     | 21.09 |
|   |                           |                       | PPE   |
| Door CLOSED Incident Energy, Cal/cm <sup>2</sup> @450mm | 0                         | Arc Flash Boundary, m | 0     |
| Door OPEN Incident Energy, Cal/cm <sup>2</sup> @450mm   | 4.39                      | Arc Flash Boundary, m | 2     |

Door Open Arc Flash Boundary for Category 2 PPE is 18.8

**2** **WARNING** Arc Flash Hazard | Wear Category 2 PPE

# Types of Personal Protection Equipment

| PPE CATEGORY 1  | PPE CATEGORY 2  | PPE CATEGORY 3  | PPE CATEGORY 4  |
|---|---|---|---|
| <p>Minimum Air Flow of<br/><b>4 cal/cm<sup>2</sup></b></p> <p><b>Air Based Cooling</b></p> <ul style="list-style-type: none"> <li>All long sleeve shirt and pants, or all ensemble</li> <li>All hair covered, or all hair suit hood</li> <li>All gloves, pants, underwear, or head (if not covered)</li> </ul> <p><b>Protective Equipment:</b></p> <ul style="list-style-type: none"> <li>Hard hat</li> <li>Safety glasses or safety goggles</li> <li>Hearing protection (if necessary)</li> <li>Heat- and/or leather gloves</li> <li>Leather footwear (if needed)</li> </ul> | <p>Minimum Air Flow of<br/><b>8 cal/cm<sup>2</sup></b></p> <p><b>Air Based Cooling</b></p> <ul style="list-style-type: none"> <li>All long sleeve shirt and pants, or all ensemble</li> <li>All heat suit hood, or all hair shield and all ensemble</li> <li>All jacket, pants, underwear, or head (if not covered)</li> </ul> <p><b>Protective Equipment:</b></p> <ul style="list-style-type: none"> <li>Hard hat</li> <li>Safety glasses or safety goggles</li> <li>Hearing protection (if necessary)</li> <li>Heat- and/or leather gloves</li> <li>Leather footwear</li> </ul> | <p>Minimum Air Flow of<br/><b>25 cal/cm<sup>2</sup></b></p> <p><b>Air Based Cooling</b></p> <ul style="list-style-type: none"> <li>All ensemble</li> <li>All long sleeve shirt, all pants</li> <li>All coveralls, all heat suit, pants, and/or all heat suit pants</li> <li>All heat suit hood</li> <li>All gloves</li> <li>All jacket, pants, underwear, or head (if not covered)</li> </ul> <p><b>Protective Equipment:</b></p> <ul style="list-style-type: none"> <li>Hard hat</li> <li>Safety glasses or safety goggles</li> <li>Hearing protection (if necessary)</li> <li>Leather footwear (if needed)</li> </ul> | <p>Minimum Air Flow of<br/><b>40 cal/cm<sup>2</sup></b></p> <p><b>Air Based Cooling</b></p> <ul style="list-style-type: none"> <li>All ensemble</li> <li>All long sleeve shirt, all pants</li> <li>All coveralls, all heat suit, pants, and/or all heat suit pants</li> <li>All heat suit hood</li> <li>All gloves</li> <li>All jacket, pants, underwear, or head (if not covered)</li> </ul> <p><b>Protective Equipment:</b></p> <ul style="list-style-type: none"> <li>Hard hat</li> <li>Safety glasses or safety goggles</li> <li>Hearing protection (if necessary)</li> <li>Leather footwear (if needed)</li> </ul> |

100 percent heat protection is provided continuously by the cooling system for the entire body.

| 3     | 20,000        | 2,000        | 3,000        | Yellow      |             |
| 4     | 30,000        | 2,500        | 3,750        | Green       |             |
| 5     | 40,000        | 3,000        | 4,500        | Orange      |             |

# Voltage Rated Tools

# Test Instruments

# Test Instruments “continued.”

- ▶ NFPA-70e, 110.4(A)(1)(e), 110.6(A)
  1. Employees shall be trained to select an appropriate test instrument and shall demonstrate how to use a device to verify the absence of voltage
  2. Only qualified persons shall perform tasks such as testing, troubleshooting, and voltage measuring on electrical equipment where an electrical hazard exists
  3. Test instruments within an organization should be standardized to facilitate their use.

# Types of Overcurrent Devices ( Circuit Breaker )

# Overcurrent Devices

## High Voltage

# Overcurrent Devices ( Fuses )

# Types of Electrical Hazards

- Defective equipment or tools

# Types of Electrical Hazards

## ► Temporary Lighting

# Types of Electrical Hazards

Improper use:

- ▶ Extension and flexible cords
  - ▶ Care
  - ▶ Connection
  - ▶ Capacity

# Types of Electrical Hazards

- ▶ Capacity affected by
  - ▶ Size of wire
    - ▶ 14 gauge = 15 amps
    - ▶ 12 gauge = 20 amps
  - ▶ Length of the cord
    - ▶ UL tag capacity
    - ▶ In general any cord over 100 ft. requires one size larger cord (14 gauge to 12 gauge)

OSHA

# Conductor (wire) Color code

**Black-Red-Blue**

120/208 Volts

**Brown-Orange-Yellow**

277/480 Volts

White/Natural Gray (Neutral)

**Green/Green with Yellow**  
(Earth Ground)

# Electrical Protection Methods

Maintain safe distance from overhead power lines:

- ▶ Staying away
- ▶ Following table shows the safe power line clearance distance for various line voltages.
- ▶ <https://youtu.be/Y2MwX738e1Y>

Source of graphics: OSHA

# Electrical Protection Methods

| Voltage<br>(nominal, kV, alternating current)            | Minimum Clearance Distance<br>(feet)   |
|--|--|
| Up to 50   | 10   |
| Over 50 to 200   | 15   |
| Over 200 to 350  | 20   |
| Over 350 to 500  | 25   |
| Over 500 to 750  | 35   |
| Over 750 to 1000   | 45   |
| Over 1000<br><br>( Remember to check Relative Humidity ) | (As established by the power line owner/operator or registered professional engineer who is a qualified person with respect to electrical transmission and distribution) |

# Electrical Protection Methods

Use ground-fault circuit interrupters (GFCI):

- ▶ Designed to protect people from electrical shock
- ▶ Detects ground faults and interrupts electric current
- ▶ Limits duration of electrical shock

Source: OSHA

# Electrical Protection Methods

Three types of GFCI:

- ▶ Receptacle GFCI
- ▶ Temporary/portable GFCI
- ▶ Circuit Breaker GFCI

# Electrical Protection Methods

Inspect portable tools and extension cords:

- ▶ Workers need to inspect extension cords prior to their use for any cuts or abrasion.
- ▶ Electric hand tools that are old, damaged, or misused may have damaged insulation inside.

# Electrical Protection Methods

Use power tools and equipment as designed:

- ▶ Follow tool safety tips to avoid misusing equipment
- ▶ Follow manufacturer's instructions

# Electrical Protection Methods

- ▶ Common examples of misused equipment

Source of photos: OSHA

These photos show examples of equipment misuse.

# Electrical Protection Methods

## Tool safety tips

- ▶ Never carry a tool by the cord.
- ▶ Never yank the cord to disconnect it.
- ▶ Keep cords away from heat, oil, and sharp edges.
- ▶ Disconnect when not in use and when changing accessories such as blades and bits.

# Electrical Protection Methods

- ▶ Avoid accidental starting. Do not hold fingers on the switch button while carrying a plugged-in tool.
- ▶ Use gloves and appropriate footwear.
- ▶ Store in dry a place when not using.

# Electrical Protection Methods

- ▶ Don't use in wet/damp environments.
- ▶ Keep working areas well lit.
- ▶ Ensure that cords do not cause a tripping hazard.
- ▶ Remove damaged tools from use.
- ▶ Use double-insulated tools.

# Electrical Protection Methods

Follow lockout/tagout (LOTO) procedures:

- ▶ Lockout/tagout
  - ▶ Essential safety procedure
  - ▶ Protects workers from injury while working on or near electrical circuits and equipment
  - ▶ Prevents contact with operating equipment parts such as, blades, gears, shafts, etc.

# Electrical Protection Methods

- ▶ LOTO prevents the unexpected release of hazardous gases, fluids, or solid matter in areas where workers are present.

# Electrical Protection Methods

## ► The Eight steps to lockout/tagout (LOTO)

1. Preparation
2. Notification
3. Shutdown
4. Lockout/Tagout
5. Check (stored energy)
6. Verification (truly de-energized)
7. Service Equipment
8. Equipment back into service

# Electrical Protection Methods

## Power source identification:

- ▶ Mark all breakers accordingly for the circuits they protect
- ▶ Mark all disconnect means accordingly for the equipment they service
- ▶ Identify all voltages with proper labeling

# Employer Requirements

Employer requirements to protect workers:

- ▶ Ensure overhead power line safety
- ▶ Isolate electrical parts
- ▶ Supply ground-fault circuit interrupters (GFCI) protection
- ▶ Establish and implement an AEGCP (Assured Equipment Grounding Conductor Program)
- ▶ Ensure power tools are maintained in a safe condition

# Employer Requirements

- ▶ Ensure proper guarding
- ▶ Provide training
- ▶ Enforce LOTO safety related work practices
- ▶ Ensure proper use of flexible cords and power strips
- ▶ Ensure proper identification of power sources
