COMBUSTIBLE DUST Management & Safety

According to a study by the chemical Safety Board, dust explosions remain a serious problem in American industry. Over the last 30 years there have been more than 3,500 combustibile dust explosions, 281 of these have been major incidents resulting in the deaths of 119 workers and another 718 workers sustained injuries.

This half-day course explains the requirements for a Dust Hazard Analysis (DHA) and an overview of the methodologies that can be employed to perform a DHA.

The course also includes a logical approach to characterizing a powder's hazardous dust properties, as well as a description of various techniques used to control and/or avoid dust explosions in a safe and compliant manner utilizing OSHA and NFPA standards.
