TRENCHING & EXCAVATING COMPETENT PERSON

OSHA requires that a "Competent Person" be on your construction or maintenance site whenever workers are exposed in an excavation.

This one-day class is designed to prepare the designated competent person to be able to recognize existing and predictable hazards in and around the excavation and to take appropriate corrective measures. Topics covered include critical excavation safety terminology and concepts, soils analysis, protective system options and selection, and comprehensive coverage of the requirements of Subpart P of the OSHA Excavation Standard.

The employer must designate a competent person to oversee the safety of employees in and around the excavation. That individual must have had been trained in soils, protective systems, and in the requirements of the Excavation Standard. Additionally, it is a good idea that any other employee involved in excavation work be informed of the hazards and how to work safely.

Many individuals who attend competent person training are not necessarily going to be designated as the competent person, but they are trained in order to have an increased awareness of the hazards.
